EXPERIENCE

APRIL 2021 – PRESENT

Senior Software Engineer | Accenture, Cybergate Tower 2, Edsa Avenue, Mandaluyong City, Philippines

Built and maintained large-scale web applications, integrating software components into fully functional platforms and lately adjusted to AI driven features. Ensuring high code quality through documentation, review, refactoring, and team collaboration. Developed responsive features that fetched, parsed, and formatted analytic data into React components and provided ongoing technical support.

Key Projects Handled

- IRG – Internal Project/enterprise application supporting large-scale business operations.
- GPH Lite (Chronos) – Internal Project and lightweight system focused on streamlined workflows and data visibility.
- Chevron Corporation – Enterprise-level web solutions for oil and gas data management and analysis.
- GenWizard University – Internal Project and Learning platform supporting training, content delivery, and user engagement.

FEBRUARY 2019 – MARCH 2021

Web Developer | Forecasting and Planning Technologies Inc., Sen. Gil Puyat Avenue, Makati, Philippines

Worked on front-end and back-end development, including database management and SQL optimization. Designed and developed responsive web applications based on client requirements, resolved application issues, and contributed across the full development lifecycle while supporting client presentations.

Key Projects Handled

- HRIS – Enhanced and supported human resource systems to improve usability and functionality.
- Real Estate Solutions – Developed responsive applications for property management and client engagement.
- Manufacturing Web Applications – Implemented tools to support manufacturing workflows and data management.
